PROFESSIONAL SUMMARY

- Senior UX Designer focused on complex, data-heavy **Analytical Dashboards** and enterprise workflows across finance, security, operations, and e-commerce products.
- Hands-on experience translating business goals and large datasets into clear **Information Architecture**, user flows, **Wireframing**, **Prototyping**, **Data Visualization**, and responsive dashboard experiences.
- Developed scalable **Design Systems** using reusable **Components**, **Symbols**, **Overrides**, typography, color, spacing, interaction patterns, and accessibility standards across **Sketch** and **Figma** workflows.
- Designed dashboard experiences with tables, filters, drilldowns, charts, alerts, comparisons, trends, KPIs, workflows, and role-based views using **Figma**, **Sketch**, **Chart.js**, **D3.js**, **Tableau**, and **Power BI** concepts.
- Collaborated with product managers, business stakeholders, developers, analysts, and QA through design reviews, usability feedback, **Agile** delivery, and **AI-Assisted UX Design** workflows.

TECHNICAL SKILLS

UX Design	**Analytical Dashboards**, **Information Architecture**, **Interaction Design**, User Flows, **Wireframing**, **Prototyping**
Design Tools	**Sketch**, **Figma**, **Adobe XD**, **FigJam**, **Miro**, **Symbols**, **Overrides**, **Components**
Visualization	**Data Visualization**, **Chart.js**, **D3.js**, **Tableau**, **Power BI**, KPI Design, Trends, Drilldowns
Design Systems	**Design Systems**, Component Libraries, Typography, Color, Spacing, Responsive Design, **Accessibility**
Research & Testing	Stakeholder Interviews, **User Research**, **Usability Testing**, Heuristic Evaluation, Design Validation
Product Domains	Finance, Security, Operations, Sales, Marketing, E-Commerce, Data-Heavy Products
Collaboration	Product Managers, Engineers, Analysts, QA, **Agile/Scrum**, **JIRA**, **AI-Assisted UX Design**

PROFESSIONAL EXPERIENCE

IBM | Full Stack Developer **May 2025 - Present**

New York, USA

Project: Enterprise Identity and Access Governance Security Platform

Project Overview:

Cloud-enabled platform managing identity lifecycle, roles, entitlements, access reviews, approval workflows, authentication, authorization, and auditable access history across enterprise applications.

Roles and Responsibilities:

- Designed **Analytical Dashboards** for identity lifecycle, access requests, approval queues, access reviews, entitlement risk, audit findings, and compliance status across enterprise applications.
- Translated complex identity and security datasets into KPI cards, trends, risk distributions, sortable tables, filters, drilldowns, exception states, and role-based operational views.
- Created **Information Architecture**, user flows, **Wireframing**, and interactive **Prototyping** for administrator, reviewer, approver, auditor, and support-team journeys.
- Built reusable **Design Systems** and **Shared UI Component Libraries** with **Components**, **Symbols**, **Overrides**, typography, spacing, color tokens, form patterns, tables, charts, and accessible states.
- Used **Figma** and **Sketch** workflows for dashboard concepts, high-fidelity screens, clickable prototypes, design specifications, redlines, and developer handoff.
- Defined **Data Visualization** patterns for comparisons, distributions, progress, exceptions, historical trends, thresholds, and dense tabular information using **Chart.js** and **D3.js** concepts.
- Facilitated design reviews and usability feedback with product managers, security stakeholders, analysts, developers, QA, and architects and iterated based on findings.

- Used **AI-Assisted UX Design** tools for rapid content exploration, alternative layouts, interaction ideas, research synthesis, and accessibility checks while maintaining human review.

Environment: Analytical Dashboards, **Data Visualization**, **Information Architecture**, **Interaction Design**, **Wireframing**, **Prototyping**, **Design Systems**, **Figma**, **Sketch**, **Components**, **Symbols**, **Overrides**, **Chart.js**, **D3.js**, **Accessibility**, **Usability Testing**, **AI-Assisted UX Design**, **Agile/Scrum**, **JIRA**

HCL Technologies | Technical Analyst **Jan 2020 - Jan 2024**

India

Project Role: Java Full Stack Developer

Project 1: Real-Time Financial Fraud Analytics and Investigation Dashboard

Data-heavy finance dashboard supporting transaction monitoring, configurable risk rules, fraud alerts, investigation queues, case management, reconciliation, and audit workflows.

Project 2: E-Commerce Operations and Fulfillment Analytics Dashboard

Operations dashboard supporting order volume, inventory status, payments, fulfillment performance, shipment tracking, cancellations, refunds, returns, and service metrics.

Roles and Responsibilities:

- Designed complex **Analytical Dashboards** across two data-heavy products, presenting financial risk, transaction alerts, investigation workload, order volume, inventory, payments, and fulfillment performance.
- Created user flows, task models, **Wireframing**, and high-fidelity **Prototyping** for fraud analysts, operations users, case reviewers, fulfillment teams, and product stakeholders.
- Designed **Data Visualization** experiences using KPI cards, time-series charts, comparisons, risk distributions, funnel views, status breakdowns, heatmaps, filters, and detailed tables.
- Used **Sketch** and **Figma** patterns for **Components**, **Symbols**, **Overrides**, responsive layouts, reusable navigation, forms, filters, empty states, error states, and interactive prototypes.
- Maintained **Design Systems** and **Shared UI Component Libraries** to improve consistency across finance and operations dashboards and reduce duplicate design effort.
- Partnered with product managers, analysts, engineers, QA, and operations stakeholders to clarify requirements, review concepts, validate feasibility, and refine workflows.
- Conducted heuristic evaluation, usability feedback sessions, accessibility reviews, and iterative design validation for dense workflows and high-volume data views.
- Prepared annotated specifications, interaction notes, responsive behavior, component states, and developer handoff documentation and supported implementation reviews.

Environment: Analytical Dashboards, **Data Visualization**, **Sketch**, **Figma**, **Adobe XD**, **Wireframing**, **Prototyping**, **Design Systems**, **Components**, **Symbols**, **Overrides**, **Information Architecture**, **Interaction Design**, **Chart.js**, **D3.js**, **Tableau**, **Power BI**, **Accessibility**, **Usability Testing**, **Agile/Scrum**

EDUCATION

Master of Science in Information Systems | Indiana Institute of Technology, USA | January 2024 - May 2025

Bachelor of Technology | Vignan's Institute of Technology, India | 2018 - 2021
